

Bias Lighting provides optimum picture and viewing comfort for all users.

Bright monitor contrast in a dimmed lighting environment can cause the eye to strain and the user to become fatigued.

The Proven Benefits of Xybix Bias Lighting

- Reduces or eliminates eye strain and viewing fatigue in dark viewing conditions.
- Eliminates image contamination due to reflections, haze and glare on the screen from conventional room lighting.
- Enhances perceived black levels, contrast ratio and picture detail by enabling dark adapted viewing.
- Preserves correct color perception by the viewer.
- Works with low level illumination in communication centers and reading rooms to provide light for movement and peripheral activities.

Added User Benefits

Used with Xybix's MyClimate controller for easy dim and brighten user preference.

Attached to Xybix's Rollrevision for precise lighting no matter where user focal depth preferences are.
